

Bonding

There are many options available for solving cosmetic dental problems. Bonding is a procedure in which tooth-colored composite resin materials are applied to your teeth. Due to the advances in materials and techniques these resorations are extremely strong and durable. Dr. Burba specializes in cosmetic dentistry, his expertise and experience ensures that you will have a pleasant visit here.

Bonding can improve many problems:

- Discolored teeth
- Chipped or misshapen teeth
- Spaces or crooked teeth

Spacing between the two front teeth can be corrected.

Repair a chipped tooth to restore your smile.
