

Invisalign®

2010 Preferred Provider Invisalign is the clear way to straighten teeth with a series of custom-molded aligners. The aligners are removable and virtually invisible, which means you can straighten your teeth without anyone knowing. With the Invisalign breakthrough technology you can get the smile you want without traditional metal braces or brackets that cause mouth abrasions. You can still eat and drink what you want. Also, you can brush and floss normally to maintain healthy gums and teeth. How does Invisalign work?

- Invisalign uses 3-D computer imaging technology to map the complete treatment from start to finish.
- Wear each set of custom-made aligners for about two weeks.
- Remove only to eat, drink, brush, and floss.
- Your teeth will move gradually each week.
- Visit us every 4-6 weeks.
- Total treatment time averages 6-15 months.
- Average number of aligners is between 18 and 30. Invisalign is used to correct several common issues such as:
 - Overly crowded teeth
 - Widely spaced teeth
 - Crossbite
 - Overbite
 - Underbite

Dr. Randy Burba has a commitment to learning the latest technology advances through continuing education. Our patients can be confident that we will provide the best treatment outcome due to our proficiency and expertise to design treatment plans specific for your needs. Call us today to schedule your FREE consultation and find out how Invisalign can work for you. Some insurances may cover the cost of orthodontics, please speak with our scheduling coordinator for more information. 1-978-744-7575team@burbadental.com978-744-7575
